## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 19, drawn to a semiconductor device, classified in class 257, subclass 310.
- II. Claims 5-18 and 20, drawn to a method for fabricating a semiconductor device, classified in class 438, subclass 3.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device of group II invention could be made by a materially different process. For example, selectively forming a conductive film on the high dielectric constant film to form an electrode, instead of forming a conductive film on the high dielectric constant film and then patterning the conductive film, thereby forming an electrode.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2811
